

iAgro

DOWNLOAD THE APP!

The first DSS app that turns your smartphone into **an advanced agronomic assistant** to obtain site-specific information and optimize cultivation operations **simply, quickly and economically!**

APP FEATURES

Fields: Design and create your field records

Weather: 7-day super-local weather forecasts and frost risk

Spraying windows: Check the best time to apply pesticide treatments

Forecast models: Anticipate the onset of diseases and insects with 7-day forecast models

Disease detection: Check for the presence of diseases in the field by taking a photo and get targeted suggestions

Biometric parameters: Automatic calculation of height, canopy thickness and volume, and vigor indices (LAI, LWA, TRV)

Optimal dose: Consult the spray volume in l/ha to optimize the quantities of pesticide treatments

Digital Twin: Explore the 3D model of your crops

Vigor and prescription maps: Consult and export vigor and prescription maps for variable rate (VRT) operations

Soil data: Consult the main physical and chemical parameters

CO2: Calculate the absorption of soil and canopy CO2

Yield: Fruit count and size, yield maps

AI Report: Report with agronomic tips and suggestions

SUBSCRIPTION PLANS

FREE 0€ forever	BASIC 120€ /year	FARMER 250€ /year	PROFESSIONAL 390€ /year	ENTERPRISE 790€ /year
1 PU	1 PU	1 PU	10 PU	25 PU
1 ha	5 ha	25 ha	50 ha	100 ha
10 scans	100 scans	500 scans	1.000 scans	2.000 scans
Weather forecast (7 days)				
Pesticides irroration windows (7 days)				
Diseases/Pests forecast (7 days)				
Diseases/Pests Identification*				
Satellite maps and vegetation indices (historical 2 years**)				
Soil data				
CO2 absorption calc.				
Yield maps, count and fruit size*				
Data export and AI reports				
-	Remote start-up and assistance		Remote start-up	
-	In-field start-up***		In-field start-up	

Prices exclude VAT.

* For a Free subscription, only 10 photos are available. ** For a Free subscription, only the last month.

*** Upon request, Italy only.

HOW 3D SCANNING WORKS

Scan a section of your row or an isolated tree with your smartphone.

Upload the scan to the cloud, even later, and wait a few minutes for processing.

View results: canopy thickness, height and volume, LAI, LWA, TRV, optimal water dose for treatments

View the 3D point cloud (digital twin) of the scanned tree on your smartphone

HOW 3D SCANNING WORKS

Repeat the scans in a sufficient and well-distributed number of points in your field (min. 5 points per field)

Complete all field scans within 5 days to get correct results

View and share vigor maps (LAI) and optimal water dose maps for treatments for each survey.

View and share the numerical results of each scan within the same survey.

ADVANTAGES

Average reduction of up to **30%**
in pesticides and water usage
(with peaks of **50%**
in early phenological stages).

Increase in yield and
quality up to **20%**

Reduction of
environmental
impact and on rural
communities.
